

Academic Research

Data collection and storage is an important process during the research. It can't be ignored that you have to following the rules and guidelines when collecting, analyzing, and storage data. In order to interpret the correct results of the research, you have to plan in advance and record precisely the historical of collecting and processing research data. Inappropriate data collection process might influence the physiology and psychological of testers and also might mislead the other researchers make the wrong interpretation or decision.

To promote the professional knowledge of ethics in research and get familiar the meaning of the research ethics review system, we have had 4 meetings with the Central Regional Researcher Ethics Center, and the number of people that have completed the training session and received the certificate has amounted to 201 person times.

Give the testimonial and take a photo with Center's lecturers.

Trainees focus on listening to the research ethics review system
